Sean,

So far all of the samples have been collected at their prescribed stratified random sample location and no contingency alternate locations (Alternate Location 1, 2 etc.) were used. They did have to resort to the contingency 50-foot radial distance contingency on 4/3 due to poor recovery within the 25-foot radius per the FSP. We will make sure to track and update you if any alternate stratified random locations are implemented.

Thanks Howard, so thus far, no issues with taking the sample in the exact spot prescribed in the random stratified? Would like updates when they have to go to the backup locations if possible.

Sean and Davis,

Attached is the daily report for the oversight of the surface sediment sampling on Thursday. Surface sediment sampling will continue throughout the weekend and we are planning to resume oversight on Monday.

Please contact me if you have any questions.
